I checked with the BLM, and they responded that they did a survey and didn't find anything.

Doug,

Thanks for double-checking. I found my older email and have pasted it in below.

This is a high site density area, and so this would be one that, if at all possible, I'd like to work with you and the operator to see if there is any way at all to account for the high site density. Obviously, an inventory is the most straightforward, but not the cheapest, way to do this. SO, if you could feel out the operator and let me know, I'm willing to work on it.

Thanks!

Matt

RE: E/019/058

I've reviewed this application per the MOA between DOGM and us with regard to the proposed developments and the potential for location of eligible sites within the project area.

It appears that none of this area has been previously surveyed, but inventories around the project area have indicated a high site density. There is good probability that significant archaeological sites are located in the project area.

I very much recommend that DOGM consider requesting a cultural resources inventory of the proposed project areas. Per the MOA, the decision regarding whether or not to implement my recommendations rests with DOGM.

Thanks for the opportunity to review.

Matt

Here's another exploration project for you to take a look at.

>>> Doug Jensen 7/7/2006 9:56 AM >>>
You reviewed this one for me some time ago but somewhere in the process I lost your response. I believe that you stated that there were areas of concern here.
